CARE AND MAINTENACE

Foamo, illuminated acousitcs

CLEANING

To remove stains from your luminaire, it is best to use the separate piece of melamine foam included in the cleaning kit. Less superficial stains on basic white luminaires can be removed with water. Moisten the separate piece of melamine with water. Brush the surface of the stain with long strokes. The result should be visible immediately. Finally, let the luminaire air dry.

We strongly advise against the use of other cleaning agents.

INSTALLATION AND STORAGE

The melamine foam has a spatial mesh structure, formed by very fine and slightly porous connections. This network structure has a great sound-absorbing ability. It however complicates the installation of the luminaires. Products damaged during installation not carried out by Foamo or its partners can therefore not be warranted. If the luminaire is not installed immediately after delivery, it is of great importance the packaging box is preserved horizontally, as to prevent loss of shape.

ADDITIONAL

Every luminaire is made by hand in our studio in Zaandam (greater Amsterdam area), and carefully checked for irregularities. Being handmade, every product is unique. Therefore small variables in the appearance of the luminaires may occur.

The bottom plane of a luminaire may twist by a small degree, induced by the soft characteristics of the melamine foam and air humidity.

Our melamine foam complies with the most important international fire safety regulations, including DIN 4102 part 1 (B1) and BS 476 part 6/7 (Class 0). The safety of our products with regard to health is certified by OEKO-TEX Standard 100, hence being environmental friendly. More information about the ecological footprint of our melamine foam upon request.

Our luminaires come with dimmable LED light bulbs. A dimmer however is not included.
